

V2E2C2V composition in RBF Nabla4

Two-stage neighbor connectivity: E2C2V $\rightarrow$ V2E

- E2C2V: 4 diamond vertices $\rightarrow$ edge (CalculateNabla4)
- V2E: edge $\rightarrow$ central vertex (RbfVecInterpolVertex)
- vertex field (u_{vert}, v_{vert})
- cell pair sharing edge e^*

V2E2C2V neighbor connectivity

- V2E2C2V (fused): vertex $\rightarrow$ central vertex, directly
- vertex field (u_{vert}, v_{vert})
